

# An Award-Winning Delivery-Focused IT Consultancy

 **bjss**

# BJSS is an award-winning delivery-focused IT Consultancy

With over 20 years' software delivery and IT advisory experience, we are renowned for technical excellence, cost-effective delivery and our proven BJSS Enterprise Agile approach.

With offices across the UK and USA, BJSS clients include some of the world's largest companies including investment banks, retail banks, government departments, energy companies and financial institutions.

We employ over 500 technologists, project managers and consultants and have established a reputation for the successful design and delivery of reliable,scalable, high-availability enterprise applications.

We're the leading supplier of services on the G-Cloud framework.

As the leading supplier of services under the government G-Cloud procurement framework, BJSS has been instrumental in the delivery of more cost-effective IT services for UK Government and NHS clients.

Leading the adoption of Agile delivery methods, championing the use of Open Source software and pioneering the use of secure public Cloud technology has helped our clients achieve dramatic cost and efficiency improvements.

# Hospital Episodes System (HES)

HES provides the data warehouse for patient activity across hospitals and contracted independent facilities in England - approximately 1.5Bn records and growing by 125 million records every month. BJSS worked in partnership with HSCIC to re-write and bring HES back into HSCIC control. The re-write modernised and reduced complexity the technology, enabling regular releases.

## Spine 2

BJSS was awarded the contract to build the replacement for the NHS Spine in partnership with HSCIC. Extensive use of Open Source Software and an agile development approach will enable dramatic reductions in development and operational costs without compromising the complex integration landscape.

## NHS e-Referral Service (eRS)

eRS will succeed the existing Choose and Book service and provide an online referral and appointment booking system enabling NHS professionals and patients to select their preferred healthcare provider and appointments.

Developed using the proven BJSS Enterprise Agile approach eRS will see the reliance on proprietary software being replaced with an open flexible platform that can easily integrate with other systems and be hosted on commodity infrastructure.

Foreign &  
Commonwealth  
Office

## FCO Crisis Hub

BJSS re-engineered the Foreign & Commonwealth Office system used to capture and disseminate information about UK citizens affected by crises abroad. The project delivered a number of 'firsts':

- The use of an Agile delivery approach - BJSS Enterprise Agile - rather than the traditional waterfall approach.
- The use of exclusively Open Source Software to minimise licensing and on-going support costs and vendor lock-in.
- Hosting using public Cloud technologies whilst being compliant with UK Government information security standards.

Agency

## DVSA

BJSS was selected as DVSA's Application Integration Partner to coordinate the activities of a range of service suppliers and deliver Technical and Functional Testing and Assurance services to ensure fitness for purpose of the delivery partners engaged in its ICT Modernisation programme.

BJSS Technical Architects provided advisory services to the Technical Design Authority team, identifying common components and managing the delivery of those components into the Systems Integration testing process. BJSS is also responsible for taking the application through a service introduction process for acceptance by the hosting and application management partners.

# BJSS Enterprise Agile

Underpinning BJSS' software delivery engagements is BJSS Enterprise Agile - a flexible approach that ensures success. We've combined over 20 years of practical experience developing distributed, high performance, high availability software systems with elements of methods such as XP, SCRUM and the Unified Process into a practical toolkit for consistent delivery - successful even in environments dominated by more rigid processes such as Waterfall.

## Differentiators

**Focus on Risk:** An architecture-centric approach coupled with early and continuous technical testing avoids late-breaking and expensive architectural changes and encourages the appropriate discussions regarding project priorities.

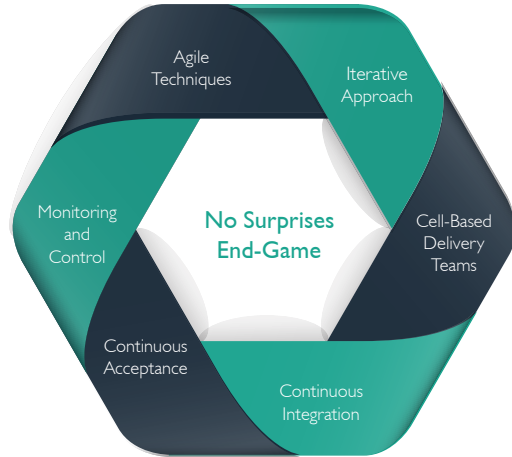

**Complete Project Delivery Coverage:** BJSS Enterprise Agile expands a limited scope by adding a strong focus on sound management practices and providing guidance for the role of management.

**Transparency:** Complete visibility of project status and issues as well as comprehensive metrics support calibration of the plan, facilitating joint decision-making, leading to a 'No surprises end-game'.

**Necessary and Sufficient Formality:** A formal project structure to support early risk eradication and increased certainty of delivery and quality.

**Proven at Scale:** The approach has been proven to scale from small engagements to global enterprise system deliveries.

**Practical and Flexible:** BJSS Enterprise Agile complements existing organisational governance structures whilst retaining the flexibility to scale to a wide range of organisation and project types.
