

# An Award-Winning Delivery-Focused IT Consultancy

 **bjss**

# BJSS is an award-winning delivery-focused IT Consultancy

With over 20 years' software delivery and IT advisory experience, we are renowned for technical excellence, cost-effective delivery and our proven BJSS Enterprise Agile approach.

With offices across the UK and USA, BJSS clients include some of the world's largest companies including investment banks, retail banks, government departments, energy companies and financial institutions.

We employ over 500 technologists, project managers and consultants and have established a reputation for the successful design and delivery of reliable, scalable, high-availability enterprise applications.

## Technology has radically changed the way media and telco services are consumed.

A proliferation of new mobile devices and changing lifestyles means frequent adjustments to content delivery methods. Keeping pace with change to find new revenue streams as old commercial models evolve is essential. The challenge is to ensure that while the consumer experience is rapidly evolving that the supporting infrastructure can scale and that back office systems remain reliable.

BJSS recognises these challenges and has helped a number of clients in the sector achieve shorter high quality release cycles through application of BJSS Enterprise Agile methods and delivery tools and environments. We know that a quick turnaround doesn't mean sacrificing quality or stability.

Our expertise in the sector includes delivery a variety of outcomes to our clients. We have reduced time to market through implementation of automated equipment provisioning, increased sales revenues and conversions through enhanced online customer experiences and reduced the manual effort and time taken to publish content to multiple platforms.

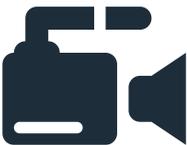

## Client On-Boarding System for UK Broadband Provider

BJSS deployed a multi-disciplinary team of Development and Test Managers, Team Leads, Developers and Testers to work onsite alongside the client's own resources. The BJSS team quickly got up to speed with the business domain and worked to deliver software across the customer facing web interface, mid-tier components and integration to operational provisioning systems. In addition to the core delivery engagement BJSS was invited to assist with a change project to implement new development and test environments, SDLC tooling and agile processes.

## Peer-to-Peer Lending Portal

Our client was looking to set up the first online social lending marketplace for consumer borrowing that required no bank interaction, minimal overheads and no unethical investments. They wanted a site that was easy to use, secure and reliable. Given the complexity involved in the process of information gathering, credit checks and in particular the lender/borrower matching requirements, the site needed to incorporate a configurable workflow system and a sophisticated matching engine. We were able to draw upon our expertise in building trading systems for big blue chip organisations to manage the project and engineer the build. BJSS Enterprise Agile approach enabled us to adapt to the constantly changing functional and regulatory requirements whilst maintaining the high level of quality and availability required of a public-facing financial system.

## Broadcast Video on Demand

A British network broadcaster wanted to improve a set of internal applications that had evolved organically over a number of years to manage the content publishing workflow for VoD content. BJSS was engaged to assist with the consolidation of these applications and ensure flexibility and ease of use going forward to support the changing needs of the organisation.

BJSS consultants provided assistance to the client's internal team in the following areas:

- Technical design and guidance on the appropriate technology stack, products and toolkits to provide a blueprint for future application development
- User Experience consulting and production of a UI style guide and branded developer toolkit of UI controls
- Delivery of a test approach for the implementation of an effective automation test framework

The advice provided included guidance on moving to a Service Oriented Architecture and developing and testing services and applications to use this paradigm.

# BJSS Enterprise Agile

Underpinning BJSS' software delivery engagements is BJSS Enterprise Agile - a flexible approach that ensures success. We've combined over 20 years of practical experience developing distributed, high performance, high availability software systems with elements of methods such as XP, SCRUM and the Unified Process into a practical toolkit for consistent delivery - successful even in environments dominated by more rigid processes such as Waterfall.

## Differentiators

**Focus on Risk:** An architecture-centric approach coupled with early and continuous technical testing avoids late-breaking and expensive architectural changes and encourages the appropriate discussions regarding project priorities.

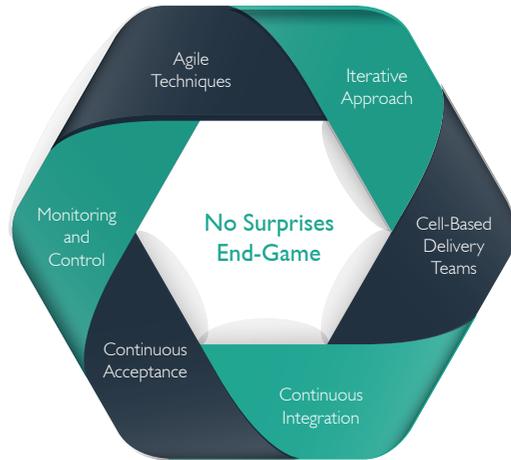

**Complete Project Delivery Coverage:** BJSS Enterprise Agile expands a limited scope by adding a strong focus on sound management practices and providing guidance for the role of management.

**Transparency:** Complete visibility of project status and issues as well as comprehensive metrics support calibration of the plan, facilitating joint decision-making, leading to a 'No surprises end-game'.

**Necessary and Sufficient Formality:** A formal project structure to support early risk eradication and increased certainty of delivery and quality.

**Proven at Scale:** The approach has been proven to scale from small engagements to global enterprise system deliveries.

**Practical and Flexible:** BJSS Enterprise Agile complements existing organisational governance structures whilst retaining the flexibility to scale to a wide range of organisation and project types.
